

Advanced Energy (AE) is pleased to offer motor service center auditing for the Electrical Apparatus Service Association's (EASA) Accreditation Program. In a competitive bid process, AE was selected as one of the third party auditors for this new program from EASA.

The AE Motor and Drives team has provided services to the motor industry since 1990, operating from its internationally accredited test lab in Raleigh, NC. Our lab was the first in the world to be certified specifically for motor efficiency testing by the National Institute of Standards and Technology in 1997. Today, we remain the only independent NIST accredited motor test lab in North America and hold several other certifications.

AE has been an Allied member of EASA since December 1992 and we recognize the important role EASA and its members play in keeping motor driven systems running with expert service and advice. Our goal is to guide your service center through the Accreditation process with the same expert service and advice you provide your customers.

Through our pre-audit guidance we can identify and resolve many potential concerns before traveling to your facility and work with you to help ensure a successful onsite audit. Advanced Energy is committed to making your audit process as straightforward and informative as possible.
