

SGS

The origins of Baseefa date back to research work into explosion safety in coal mines in the 1920's. Originally part of the UK government's Health and Safety Executive, it became independent in 2002 and part of SGS, the largest test, certification and inspection body in the world, in 2011

From its bases in the UK and Singapore, SGS Baseefa is pleased to offer audit services to service centres across the world who are seeking recognition in the Electrical Apparatus Service Association's (EASA) accreditation program.

Having operated a UK national acceptance scheme for workshops repairing hazardous area rotating electrical machines since 1990 and having been active within the internationally recognised IECEx Service Facility Certification Scheme since its inception in 2008, we are well placed to put our experience at the disposal of those seeking EASA accreditation.

If you repair machines used in hazardous atmospheres (HazLoc) we can add the IECEx requirements, based on conformity to IEC 60079-19, to the EASA requirements and cover both schemes at the same time, minimising your costs.

Our objective is always to ensure that your costs are contained by making sure that you are as ready as possible for the audit visit. We ask you to provide a pre-audit package from which we will provide our final fixed-price quotation. Many simple problems can be ironed out in advance, ensuring that the audit goes as smoothly as possible.

For more information, and an indication of likely costs, based on your location and size of facility, please contact our Service Facility Manager, Allan Ogden, Facility Auditor, Phil Oates or our Service Facility Administrator, James Wild at:
