

Assuring the efficiency and reliability of repaired electric motors

EASA Accreditation Program

Let UL audit your facility to the requirements of ANSI/EASA AR100

The Electrical Apparatus Service Association, or EASA, has developed an international accreditation program for service centers based on the sources of these good practices known as the ANSI/EASA AR100: Recommended Practice for the Repair of Rotating Electrical Apparatus.

The intent of this accreditation program is to evaluate service centers for evidence of compliance to assure that they are using prescribed good practices to maintain motor efficiency and reliability during repairs of electric motors. The program accomplishes this by use of sanctioned auditors like UL.

Our EASA Accreditation provides stakeholders with the confidence that their service centers are operating at maximum efficiency and compliance. In our 125-year history, we've learned that the safety and reliability of our independent, third-party inspections are of the utmost importance to your clients, coworkers and board members.

Why UL should be your EASA-sanctioned auditor

UL empowers trust by leveraging a global network of technical experts and our trusted brand to deliver auditing services that enable motor rebuilders to gain industry acceptance, demonstrate compliance and mitigate risk. The easiest way to verify that your company complies with the EASA Accreditation Program is to utilize the experience of UL Auditors.

Benefits include:

- **Quick Turnaround Time** – Our vast network of knowledgeable Field Engineers will allow you to schedule audits at your convenience.
- **Affordable Fee Structure** – Fees quoted include all travel and expenses. No surprise charges. No travel fees.
- **Skilled Auditors** – UL's Field Engineers perform audits and inspections across a spectrum of industries. We will assist you in ensuring your company meets all ANSI/EASA AR100 requirements.
